MEMORANDUM FOR Joint Integration Test Facility Customers

FROM: AFRL/IFEB
        32 Brooks Road
        Rome NY 13441-4114

SUBJECT: Department of Defense Intelligence Information System (DODIIS) Joint Integration
            Test Facility (JITF) Test Procedures Document Update

1. The JITF recently updated the DODIIS JITF Integration Requirements and Test Procedures
    Document to Version 3.0. The following information is provided for clarification of
    Requirement DOC-26:

DOC-26 If the application design includes implementation of Java applets, the application
documentation shall include documentation of application server registration with Intelink
Central, documentation of Java applet registration with Intelink Central, and documentation of
results of Java applet code review.

REQUIREMENT CLARIFICATION	TEST METHOD	IMPACT CODE RANGE
DODIIS policy states that Java applets must be registered with Intelink Central and that a code review of each applet should be conducted. Intelink policy states that only registered applets are permitted on servers accessible through Intelink. In the absence of proof of registration, the JITF must forward to the DMB a "no go" recommendation on the basis of this deficiency. The *DoDIIS Instructions* do not specifically state which organization is responsible	The application documentation will be inspected to determine if Java applets are implemented. Java applets may be hosted only on servers that are registered with Intelink Central. The server registration process does not produce written confirmation. Proof of registration is demonstrated by the listing of the mission application server on the Intelink Central Home Page. The registration of Java applets can be done on-line with Intelink Central. Copies of the registration forms can be included with the mission application documentation as documentation of registration. If the application documentation does not include proof of registration, the JITF test engineers will review the applet registration pages on the Intelink Central Home Page. The	1 - 3

for reviewing Java applet source code. The code review can be done by the security certifiers or a third party organization. It is the responsibility of the PMO to arrange code review.	requirement is not met if the applet(s) is not registered. Documentation of applet code review must include the date of the review, name and address of the reviewer(s), and a summary of findings and resolutions from the review. This requirement is Not Applicable if the application does not use Java applets.	

2. This information supercedes the data provided in the JITF Test Procedures document that is dated 15 January 2001. The JITF Test Procedures documentation will be updated to version 3.1 in the near future and will incorporate this change.

3. If you have any questions, please contact your JITF Representative or the DODIIS JITF at Comm 315-330-1781 or DSN 587-1781.
